

Cash

One system saves you time recording receipts.

Recording receipts can be a time consuming and often inaccurate process, just when you need to get accurate information into the system as quickly as possible.

Old systems typically had cashiers moving across several screens,

depending on the type of payment. Designed specifically for the purpose, Cash makes this a problem of the past. Now you can record all the information quickly and accurately, on one easy-to-use system, and print a physical receipt.

How does the Cash module work?

Cash has been specifically designed to make cashiers' lives easier and to improve financial control over monies received.

It allows users to record receipts on one, easy-to-use system, saving time and improving accuracy.

They simply take money from a customer, record it against a payment type (e.g. cash, cheque or credit card), and print out a physical receipt – they can even match sales receipts to invoices where they exist.

Summary of Key Benefits

- Saves time and reduces errors caused by re-keying information in more than one financial accounting system.
- Immediate printing of a physical receipt.
- Provides a more efficient working process for auditing.
- Simplifies the daily banking process, with a single enquiry screen displaying totals by payment type.
- Offers flexibility by allowing you to amend receipts at any time – it doesn't confirm them until you finalise the banking.
