

Journal Upload

Make complex financial transactions simple.

Designed to add extra functionality to bluQube, Journal Upload allows users to read and create journals from spreadsheet-based information.

Now you can build complex spreadsheet based models for a wide variety of tasks (for example, costing, loading aggregated transactions, and recharging costs to cost centres) and then load these quickly and accurately into bluQube without re-keying the data.

Before Journal Upload, users had to print spreadsheets, then key in tens or hundreds of different journals.

Journal Upload provides significant time and cost saving benefits for key financial people, as well as offering improved financial control and better quality information.

Summary of Key Benefits

- Saves time and reduces errors caused by re-keying information.
- Provides better quality and more accurate information for reporting including detailed cost breakdown.
- Allows bluQube to more accurately allocate costs for better financial control.
- Simplifies sophisticated costing processes.
- Versatility of Journal Upload provides excellent value for money.
